

LinesearchbeforeUdig takes home the 2016 NJUG Award!

- November 17th 2016 -

LinesearchbeforeUdig (LSBUD), the UK's free to use online search service providing utility asset information, have been awarded the 2016 NJUG 'Avoiding Damage to Underground Assets' Award at the prestigious National Joint Utilities Group event held on the 16th November at the House of Commons.

Hosted by the Chair of the Transport Select Committee, Louise Ellman MP, the NJUG Awards are a fixture in the utility street works and Parliamentary calendars, showcasing examples of industry innovation and best practice, with the aim of driving up standards and reducing disruption.

As the UK's only Trade Association representing utilities and their contractors on street works issues, NJUG promotes best practice, self-regulation and a two-way relationship with Government and other relevant stakeholders.

The award category of 'Avoiding Damage to Underground Assets' called for organisations who are taking all reasonable steps to ensure damage to underground assets is avoided.

The LSBUD submission "Increasing the accessibility and visibility of buried services through a single portal" highlighted the free to use online portal that allows any individual to check their site for the location of assets owned by over 50 members. The service helps prevent damage and disruption to the UK pipe and cable networks, processing over 1.6 million enquiries per annum.

The LinesearchbeforeUdig service fully supports and demonstrates the 'NJUG Vision for Street Works', providing excellence in the delivery of street works.

PelicanCorp CEO Duane Rodgers said that "This achievement really highlights the excellent service LinesearchbeforeUdig is providing to ensure the underground assets of the UK are protected. Congratulations to the team on the deserving win".

LSBUD is a joint venture formed in 2008 between PelicanCorp and Fisher German to provide a national One Call solution for the United Kingdom. PelicanCorp provide the technology combined with Fisher German's pipeline knowledge to protect the essential infrastructure of the UK.
